Powdery Mildew Research Survey

This survey is a part of the study that is meant to identify grower perceptions and preferences to help guide current and future grape breeding research. You can learn more about the project at www.vitisgen.org. We are especially interested in how growers value powdery mildew resistance, since this is a costly disease that affects all grapes and efforts to develop resistant varieties are already underway. The project is supported by a USDA-Specialty Crop Research Initiative grant and industry funds, all responses are completely confidential and all information will be used in summary format only.

To participate in the research survey follow the link below:

About the UC Cooperative Extension

The University of California Cooperative Extension offices are local problem-solving centers. Campus-based specialists and county-based farm, home and youth advisors work as teams to bring the University's research-based information to Californians. UCCE is a full partnership of federal, state, county, and private resources linked in applied research and educational outreach. UCCE develops and extends timely and pertinent information in a manner, which is independent, unbiased, noncommercial, and research based. These fundamental criteria set it apart from all other information resources.
